RAGHAVENDRA KUMAR

QA ENGINEER – I | 5+ YEARS

Yamunanagar, Haryana | 9050318246 | raghavendrakumar217@gmail.com | linkedin.com/in/raghavendra-kumar-27a908180

PROFESSIONAL SUMMARY

QA Engineer with 5+ years of experience in **Manual Testing, Automation Testing, API Testing, Database Testing and Mobile Testing** across **Banking, Healthcare and E-commerce** domains. Strong in **Requirement Analysis, Test Planning, Test Case Design, Functional, Regression, Integration, UAT, Defect Management and Release Validation**. Hands-on with **Playwright, Cypress, Selenium, ACCELQ, Postman, SQL** and **CI/CD**. Currently contributing to **CPCV3 Migration** for a confidential banking client using **Jenkins, Java, Gradle, SonarQube, Nexus, Git/GitHub, SecureCRT and Linux**. Applying **Generative AI, Prompt Engineering and GitHub Copilot** for **test generation, test-data creation, defect analysis, QA documentation and AI-assisted QA workflows/agents**.

PROFESSIONAL EXPERIENCE

QA Engineer (QAE-I) | Mechlin Software Technology Pvt. Ltd. | September 2021 – Present

- Perform end-to-end **QA Testing** of enterprise web, desktop and mobile applications across Agile sprint cycles.
- Analyze requirements and create **Test Plans, Test Scenarios, Test Cases, Requirement Traceability** and execution documentation.
- Execute **Functional, Regression, Smoke, Sanity, System, Integration, Compatibility, Migration and UAT Testing** to validate production readiness.
- Validate **REST APIs** using **Postman** and perform backend **SQL/Database Validation** for data accuracy and business-rule compliance.
- Develop and maintain **Automation Test Suites** using **Playwright and Cypress**; also work with **Selenium WebDriver and ACCELQ**.
- Manage the complete **Defect Life Cycle** in **JIRA and Azure DevOps**, including logging, priority/severity, retesting, regression, triage and closure.
- Coordinate testing for **5–10 team members** through task assignment, sprint tracking, coverage review, QA metrics and status reporting.
- Guide junior QA engineers on **Requirement Analysis, Test Case Design, Defect Reporting and Test Execution** practices.
- Perform **Banking Domain Testing** across onboarding, payments, account management, transaction processing and financial-data workflows.
- Conduct **Android/iOS Mobile Testing** using BrowserStack and physical devices for cross-device and cross-browser validation.
- Support **Release Management, Production Validation, Post-Deployment Smoke Testing** and root-cause analysis.
- Contribute to **CPCV3 Migration Testing** for a confidential banking client, validating migration scenarios, workflows, regression coverage, test data and compatibility.
- Work with **Jenkins CI/CD Pipelines** for build/test execution, pipeline monitoring, failure investigation and report analysis.
- Use **Java and Gradle** for build/test workflows, dependency management and investigation of build-related failures.
- Review **SonarQube** results for **bugs, vulnerabilities, code smells, coverage and quality-gate status**.
- Work with **Nexus** for artifact/dependency validation and **security-scan analysis** within the CI/CD ecosystem.
- Use **SecureCRT and Linux** for environment access, **log analysis, file/test-data validation and basic troubleshooting**.
- Use **Git/GitHub and GitHub Copilot** for code understanding, test-scripting assistance, debugging and repetitive QA activities.
- Apply **Prompt Engineering** for requirement analysis, test scenarios, test cases, test data, API/SQL assistance, defect analysis and QA documentation.
- Develop/refine **AI-assisted QA workflows and task-oriented agents** for structured test scenarios, test data, validation checklists and QA outputs.

AI & GENERATIVE AI

Prompt Engineering	Reusable prompts for requirements analysis, test cases, test data, defect analysis and QA documentation.
AI-Assisted Test Design	Positive, negative, boundary and risk-based scenario generation with QA review.
AI-Assisted Test Data	Structured data variations for functional, API, database and migration validation.
GitHub Copilot	Code understanding, test-script assistance, debugging and repetitive QA productivity.
AI QA Workflows / Agents	Task-oriented workflows for requirement-to-scenario, test-data and validation-checklist generation.
AI Skills & Training	Reusable AI skill/prompt templates and practical knowledge-sharing for QA.

TECHNICAL SKILLS

AI & Prompt Engineering: Generative AI, Prompt Engineering, GitHub Copilot, AI-Assisted Test Generation, Test Data Generation, Defect Analysis, AI QA Workflows, Task-Oriented AI Agents, Agentic AI Concepts

Testing: Manual, Functional, Regression, Smoke, Sanity, System, Integration, UAT, Migration, Web, Mobile, Database, Compatibility

Automation: Playwright, Cypress, Selenium WebDriver, ACCELQ, TestNG, Page Object Model

API & Database: Postman, Newman, REST API Testing, SOAP UI, API Response Validation, SQL, MySQL

CI/CD & DevOps: Jenkins, Gradle, Git, GitHub, GitHub Actions, Bitbucket, CI/CD Pipelines, Build & Test Execution

Quality & Security: SonarQube, Nexus, Dependency Validation, Security Scan Analysis

Linux & Environment: SecureCRT, Linux Basic Commands, Log Analysis, File Validation, Environment Troubleshooting

Tools & Process: JIRA, Azure DevOps, BrowserStack, Agile Scrum, SDLC, STLC, Defect Life Cycle, Test Planning, Requirement Traceability, Release Validation

Programming: Java, JavaScript, C# (Basic)

Domain: Banking, Healthcare, E-commerce

LEADERSHIP & DELIVERY

Team Coordination: Task Assignment, Sprint Tracking, Test Coverage Review, QA Metrics, Daily Status Reporting, Defect Triage, Risk Reporting, Stakeholder Communication and coordination for 5–10 employees. **Delivery:** Release Readiness, Production Validation and Continuous QA Process Improvement.

EDUCATION

Master of Computer Applications (MCA) | Lovely Professional University | 2021 – 2024

Bachelor of Computer Applications (BCA) | Kurukshetra University | 2018 – 2021

KEY ACHIEVEMENTS

- Quarterly Excellence Award winner for exceptional contribution to product quality and successful releases.
- Identified critical high-severity defects before production deployment, reducing potential business and customer impact.
- Improved testing efficiency through automation contribution, regression planning and process optimization.
- Recognized by stakeholders for ownership, reliability, communication and commitment to quality.
